

Kamai

Get paid in seconds. Never get scammed out of your work.

USDC escrow payment links for Pakistani freelancers · built on Solana

The problem

- **Slow & expensive.** Payoneer, bank wires and platform withdrawals cost 2–3%+ and take days.
- **Scams.** Direct clients from WhatsApp, Facebook and LinkedIn vanish after delivery, or send fake “payment sent” screenshots.
- **No trust either way.** Clients won't pay first. Freelancers can't afford to work first.

The solution

1

Freelancer sends a payment link

WhatsApp · QR · Urdu or English

2

Client pays USDC into escrow

locked by a Solana program, not a person

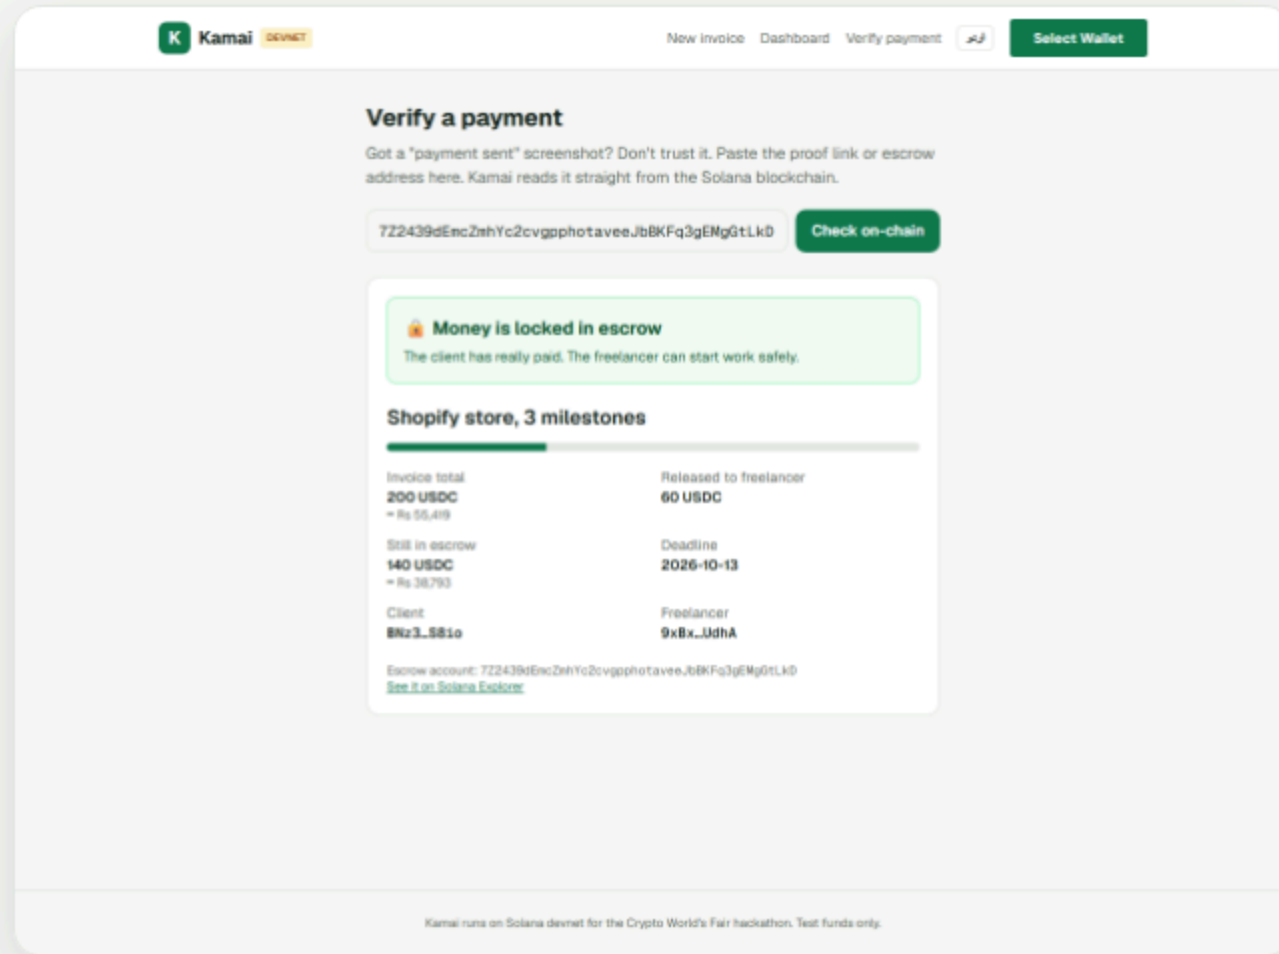

3

Released per milestone

under 1 second, under 1 rupee in fees

Freelancer cancels or the deadline passes → the client gets back whatever is unreleased.

Proof, not screenshots

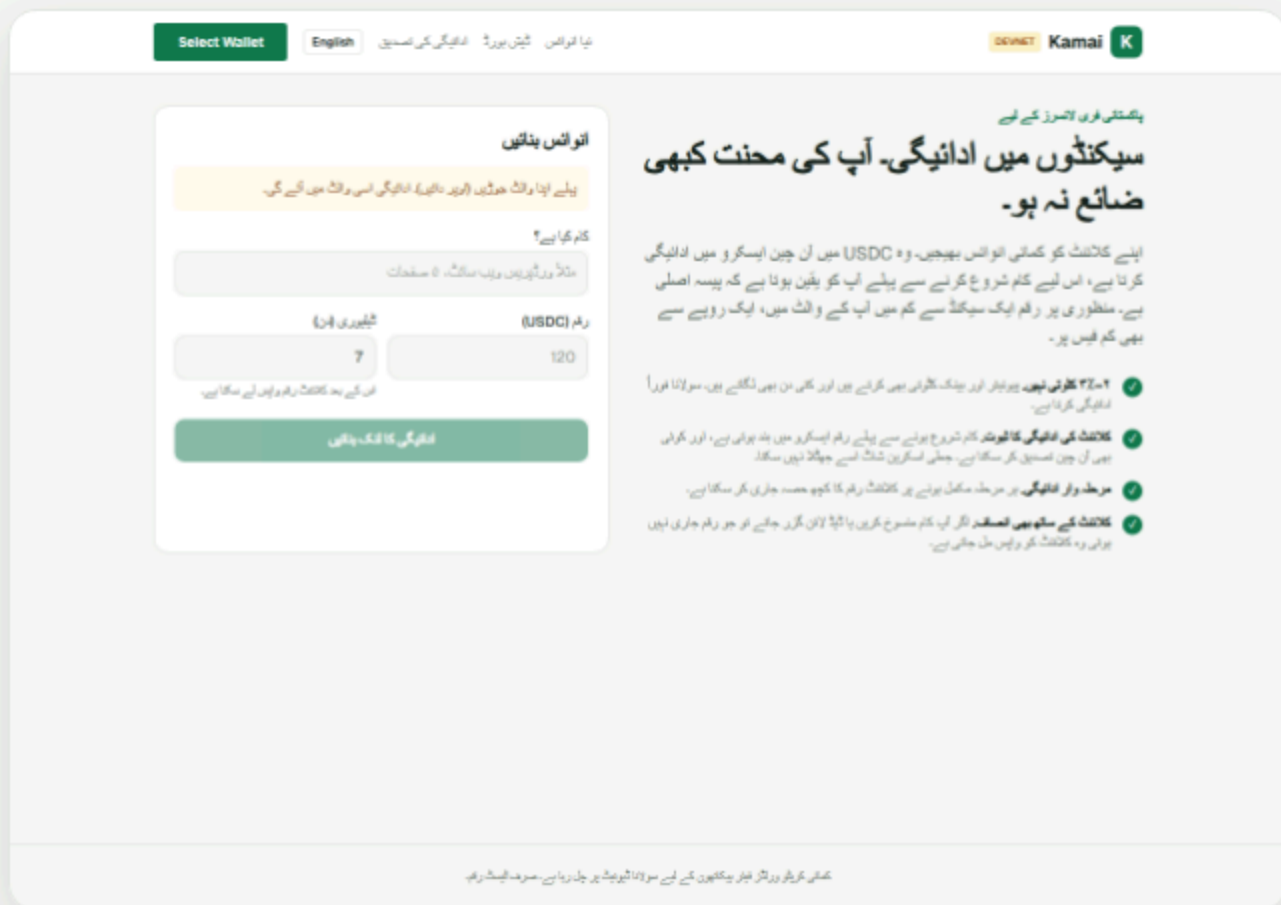

Every escrow has a public **proof link**, read straight from the blockchain.

Locked, partly paid, released or refunded: nobody can fake it.

Works without a wallet, so anyone can check.

Built for Pakistan

Full Urdu (right-to-left) and English.

WhatsApp sharing in one tap.

PKR estimates everywhere.

Why Solana

- **Sub-second finality** and fees under \$0.001 make escrow viable even for a \$20 gig.
- **USDC** = dollar earnings without a bank in the middle.
- **Anchor program:** fund · release(amount) · refund. PDA escrow + vault, 18 end-to-end tests passing on devnet.
- Works with SPL Token and Token-2022 stablecoins.

Business & next steps

- **Model:** free now → small fee on release later. Still far cheaper than today's options.
- **Next:** PKR cash-out via licensed local partners (Raast), WhatsApp invoice bot, optional dispute arbiter, on-chain freelancer reputation.
- **Live on devnet today.**
